STRIP DOORS

for environmental control

- Swinging Doors
- Hardware
- PVC Rolls

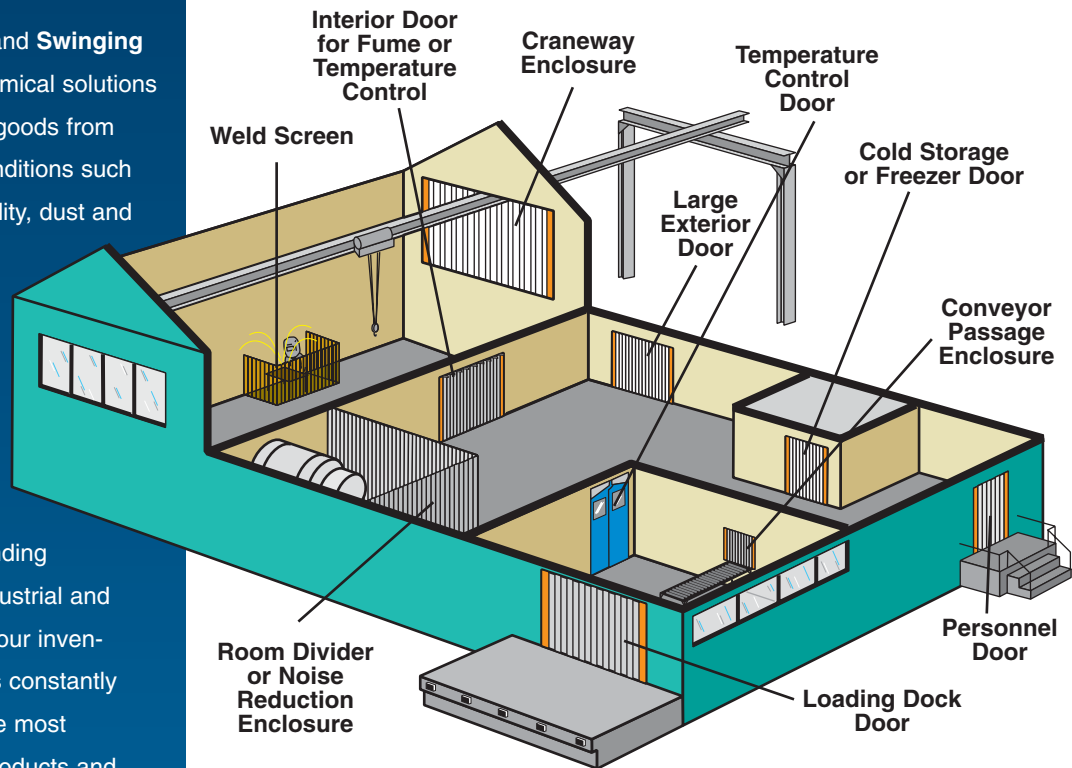

TW LLC

Why use Strip Doors & Swinging Doors?

Our **SAVE-T Strip Doors and Swinging Doors** are the most economical solutions to protect employees and goods from adverse environmental conditions such as noise, heat, cold, humidity, dust and drafts.

In order to meet the demanding requirements of today's industrial and commercial marketplaces, our inventory of **SAVE-T Products** is constantly being updated. We offer the most diversified range of PVC products and strip door hardware in the USA. Our sales staff and design engineers can handle your everyday needs or your most troublesome problems.

BENEFITS

- Reduces Hot or Cold Air Loss
- Restricts Movement of Air Pollutants
- Transparency Promotes Safety
- Provides Bird and Flying Insect Control
- Isolates Noisy Machinery
- Increases Employee Comfort
- Easy to Install
- Strong and Durable
- Minimizes Maintenance

Exclusive **RIP-A-STRIP™**

Patent No. 6,933,030

“Ready-to-Hang” Replacement Strips on a Roll

Simply open the specially designed dispenser with one hand.

Then in ...

123

STEPS

you can easily and quickly replace all of the worn strips on your pre-studded strip door.

No Knife or Tools Necessary!

PULL THE STRIP

RIP-A-STRIP is available in strip sizes from 4" to 16" wide, up to 1/4" thick, and in lengths from 1 foot to 16 feet.

HANG THE STRIP

RIP THE STRIP

Strips are 85% Pre-Cut with Pre-Punched Hanger Holes

QUICK SHIP
STOCKING PROGRAM

The items listed below are in stock and ready to ship the same day the order is placed.

All items below ship in our Specially Designed “Easy-to-Use” Dispenser

Standard Clear Flat Strips

QSRIP-8X7-10-STD	8" W x 7' L	.080" Thick	10 Pc.
QSRIP-8X8-9-STD	8" W x 8' L	.080" Thick	9 Pc.
QSRIP-12X10-7-STD	12" W x 10' L	.120" Thick	7 Pc.
QSRIP-12X12-6-STD	12" W x 12' L	.120" Thick	6 Pc.

Off-Set Double Ribbed Clear Strips

QSRIP-8X7-10-OSDR	8" W x 7' L	.080" Thick	10 Pc.
QSRIP-8X8-9-OSDR	8" W x 8' L	.080" Thick	9 Pc.
QSRIP-12X10-7-OSDR	12" W x 10' L	.120" Thick	7 Pc.
QSRIP-12X12-6-OSDR	12" W x 12' L	.120" Thick	6 Pc.

1-800-888-9750

SAVE-T® Standard PVC Clear - Strip

Standard flexible transparent strip PVC material from 4" to 16" wide and from .040" to .250" thick.

Description

- 0° F to 150° F
- Compliant with California Fire Marshal Code
- UV Stabilized

STANDARD GRADE PVC IS RECOMMENDED FOR APPLICATIONS ABOVE FREEZING AND IN TEMPERATURES AS HIGH AS 150°F.

SAVE-T® Frosted - Strip

				0°F to 150°F
6	FCF06060	.060"	400'	82 Lbs
8	FCF08080	.080"	300'	105 Lbs
12	FCF12120	.120"	200'	156 Lbs

Both sides of the strip have raised ribs spaced 2" apart and are offset by 1/2" front to back. Ribbed strips are ideal for heavy traffic strip doors because they significantly reduce scratching, so the door remains clearer and safer.

LOW TEMPERATURE GRADE PVC IS RECOMMENDED FOR USE IN FREEZERS AND EXTERIOR APPLICATIONS AT TEMPERATURES AS LOW AS -20°F.

USDA material is made of compounds that meet federal requirements for incidental contact with meat, poultry, and dairy products. This product is recommended for indoor and outdoor applications, in temperatures ranging from -20° F to 140° F. Extra Low Temp. is available for applications to -75°F.

Frosted PVC material offers a translucent quality that allows light transmission but restricts a clear view through the strip.

Amber and Aztec Red colored transparent PVC protects against the effects of UV light emitted during arc welding. However, eye protection should be worn for direct viewing of welding arcs even through this material.

Anti-Static material meets or exceeds the specifications of Federal Test Methods ST.101C and 4046. The electrical charge decay rate is 0.50 sec. with a charge potential of 5,000 volts. Please note: Any product liabilities are the sole responsibility of the end-user of that product.

Opaque materials are used where light transmission and visibility must be eliminated.

Safety Orange PVC material designates door jambs and other areas for safety purposes.

This transparent material has a special sky blue color.

Extrusion Welding

Hot Air Welding

Cutting to Size and Normalizing

Standard flexible, transparent PVC is available in rolls 36" to 60" wide. Ideal for all-weather applications, this product is formulated with an ultraviolet stabilizer and a flame retardant additive. This material is recommended for applications ranging from 0°F to 150°F.

This material provides most of the benefits of Standard PVC, except it maintains flexibility at a temperature as low as -20°F. It is designed for both interior and exterior applications. USDA material is made of compounds that meet federal requirements for incidental contact with meat, poultry, and dairy products.

These materials have the same properties as standard flexible PVC. However, the black and gray are completely opaque and the reinforced material has nylon threads that are embedded into the transparent PVC.

Strip Width, Height and Thickness Recommendation Charts

**Light Traffic
Interior Doors**

Strip Widths	4"	6"	8"	12"	16"
Strip Thickness	.060	.060	.080	.120	.160

**Heavy Traffic
Exterior Doors**

Strip Widths	8"	12"	16"
Strip Thickness	.080	.120	.160

PVC Strip Material Percentage Overlap Patterns

The information here will allow you to determine how much **SAVE-T** PVC Strip Material will be needed for your project. Based on the door height, the location and kind of traffic, different sizes of strip material (above charts) are available in six different overlap patterns (drawings to the right). For interior doors apply minimum strip overlap, for exterior doors apply maximum overlap. For heavy-duty traffic applications, use offset double ribbed material.

Linear Footage Factoring Chart

Strip Widths	Overlap %					
	25%	33%	50%	67%	75%	100%
4"			4			6
6"		2		3		4
8"	1.75		2		2.5	3
12"		1.2	1.35	1.5		2
16"	.875		1		1.2	1.5

Add 1 Strip

Note: For heavy duty traffic applications, increase strip size or apply offset double ribbed strip materials.

must be specified
with order

For forklift traffic, use
Double Ribbed PVC

Determine Linear Footage

Note: Height and width measurements should be in full feet only (i.e. 11' 2" should be 12')

Step 1: Determine the strip width and overlap percentage for the strip door (see charts and drawings above).

Step 2: Use those numbers to find the linear footage factor on the chart above.

Step 3: Take that factor from the chart and multiply it by the strip door width (in feet). The result is the number of strips required for the strip door.

Step 4: Multiply the number of strips required by the strip door height (in feet). The result is the number of linear feet of strip material needed for the strip door.

Physical Properties of *SAFET*® PVC Materials

PROPERTIES OF PVC AND OTHER MATERIALS

Material	Density lb./cu. ft.	Thermal Conductivity (K), Btu/(hr.)(sq.ft.)(deg. F/in.)	Thermal Resistance (R) (1/K)
Polystyrene	1.6	0.23 to 0.30	3.8
Pressed wood pulp	17	0.356	2.81
Wallboard	43	0.48	2.08
PVC barrier	75	0.73	1.37
Wood (Fir)	37	0.76	1.30
Building Brick	87 to 100	2.6 to 5.2	0.2 to 0.4
Window glass	150	4 to 7	0.14 to 0.25

Thermal Conductivity

Thermal conductivity is the quantity of heat passing in "unit" time through a piece of "unit" area and "unit" thickness with a temperature differential of one degree between the faces. The values in this table were obtained using ASTM Test C-177.

Tensile Strength

All of TMI, LLC's flexible *SAFET*® PVC strip and sheet products are designed and tested for both commercial and industrial applications. The materials represented in this catalog have been tested using American Standard Test Methods (ASTM).

Test	ASTM	Standard, Safety Orange and Personnel Doors	USDA	Low Temperature
Specular Transmission	D1746	80-90	70-80	70-80
Hardness Value	D2240 Inst.	79	75	69
Tensile Strength	D412	1900 psi	1700 psi	1600 psi
Ultimate Elongation	D412	300%	300%	325%
Tear Resistance	D1004	275#/in.	225#/in.	200#/in.
Stiffness	D747	0°F 8700 psi	0°F 4000 psi	0°F 2500 psi

Noise Abatement

Flexible PVC can reduce noise level from 10 db to 35 db depending on the thickness of the material. The figures in this table are the results from ASTM Test E-90 and clearly indicate the noise reduction potential of PVC material.

Transmission Loss in dB															
Freq. (Hz)	160	200	250	315	400	500	630	800	1000	1250	1600	2000	2500	3100	*Class

*Sound Transmission Class															

* Sound Transmission Class

Ultraviolet Resistance

An ultraviolet inhibitor has been incorporated into the compound of our clear materials to reduce fading and yellowing. This inhibitor also improves the material's weatherability. Our Amber material is also formulated to deter the affects of ultraviolet and near ultraviolet light. This chart shows the correlation between a carbon arc and our Amber product.

Anti-Static

This material should be considered for "Clean Room" enclosures or high tech areas where static build-up might be a detriment.

The Anti-Static performance at 73°F and 40% RM charge in kilo volts is as follows:

Initial	15 Seconds	30 Seconds	45 Seconds	60 Seconds	120 Seconds
2.00	0.30	0.15	.08	.03	.00

OFFICE OF
STATE FIRE MARSHAL

Flame Resistance

Our flexible materials either meet or exceed the California Health and Safety Code requirements of the State Fire Marshal Code for flame retardation.

Overhead Door Brackets

Heavy Duty

Standard Duty

We offer two Save-T Overhead Door Brackets. The "Heavy Duty" design provides superior strength up to 24' wide. Our "Standard Duty" design, a TMI, LLC exclusive, can be easily adjusted or rolled up on doorways up to 11' wide. All brackets are zinc plated.

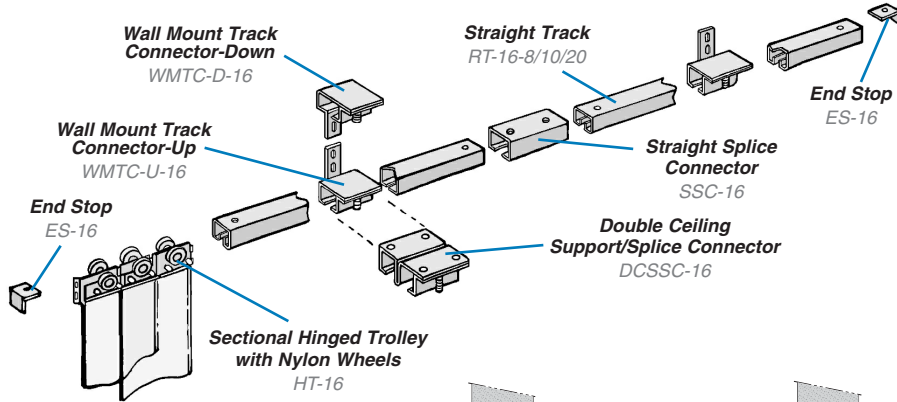

Model 3SBB

Model SDVPP

Sliding Track System

Mounting Methods

Wall space on either side of the doorway opening might be limited. Therefore, we have three basic design configurations. See the drawings to the left for your application.

Accordion Strip Doors

This revolutionary **SAFET** Accordion Strip Door can be used when a sliding strip door suits your application, but there are obstructions on both sides of the doorway opening, such as shelving or a wall. This uniquely constructed sliding strip door is your most economical solution. It is also the most cost effective way to cut your heating or cooling costs.

Just a light tug on the nylon pull-rope opens the door, moving the door to one side of the opening, or the panels can bi-part to both sides, allowing easy access for fork lifts, hand trucks, large equipment or fragile products.

you can select opening to one side . . . or bi-parting

Mega-Pro™ Swinging Doors

FOR DOORWAY OPENINGS
60" to 120" wide
Up to 120" high

Interior Applications Only

Mega-Pro™ Swinging Doors are light industrial impact doors for doorway openings up to 10' wide. This revolutionary door has a spring return and swings on an even plane.

Panel Materials

Panels are available in either standard grade clear or USDA clear, polar PVC, in thicknesses up to 9/32".

Welded-on Impact Plates are optional.

Torsion Springs

All springs are made of chrome vanadium and you have a choice of light, medium or heavy settings.

Constructed of heavy-duty galvanized steel swinging arms and mounting brackets, this hardware is located at the top of the unit only, away from normal traffic patterns. This bracket design can accommodate any doorway application.

Polar-Pro™ Swinging Doors

Anti-Curl Strip

The spring tension and panel alignment are adjustments exclusive to the Polar-Pro. The single compression spring is made of chrome vanadium.

TMI Polar-Pro™ Swinging Doors are made of USDA Low Temp PVC material and allow fast, easy access to temperature sensitive areas. The unique "swinging hardware" allows the door to open in and out on an even plane, and is the only hardware that maintains a tight seal along the top of the door opening and around the hinges. This **stainless steel** hardware system is the only fully adjustable system for in-jamb alignment and opening/closing speed control. This unique design allows the main door to be closed without interference.

Panel Materials

Panels are available in either standard grade PVC or USDA polar grade, and comes in 2 thickness, .080" and .120". Although clear material is standard on all models, there are 3 colors available.

Truck Doors

SAVE-T® Specialty Doors

Our truck strip doors can be placed easily using our exclusive ComPress® Rod and Double-U® Mounting Brackets. Mount additional brackets at different trailer depths so the strip door can be moved as the trailer is emptied.

Strip Doors

Model TSD-M

Our truck curtains are extremely durable and easy to use. Velcro® strips run the full height of the curtain on both sides to create a near perfect barrier against harmful summer heat. Vision strip is optional.

Curtains

Model TSC

Our pleated curtains go one step further because they're insulated, creating the ultimate shield against extreme heat. Velcro® strips run the full height on both sides for a tight seal. Tie-back strips can be used while loading.

Insulated Curtains

Model TPC

"M"-Series Strip Doors

These models are available in 6" and 8" wide PVC strip material in both USDA Low Temp and Standard grades. The Low Temp grade is recommended for freezer applications to -20°F. Mounting hardware and brackets are all aluminum. Each strip has a heat-sealed loop at the top which slides onto the mounting bar. This design alleviates stress at the point of contact with traffic. It also allows the strips to be rotated or replaced easily.

Other **SAVE-T®** Products

Air Doors are engineered to create an invisible wall that separates environments. Not only does it stabilize work area temperatures, but it saves on expensive energy costs.

Air Doors provide year round comfort for customers and employees. Our Industrial Air Doors are used for both interior or exterior doorways at plants and warehouses and we have heating options available.

All Commercial and Industrial Series Air Doors have heating options. Although electric heaters are the most popular, steam, hot water and gas-fired units are available.

Industrial Curtains & Enclosures

Softwall partitions are the most inexpensive solution to contain environmental problems such as dust, smoke, humidity, adverse temperatures and noise. Our Pipe Staff design adds stability and security with "lock-up" cane bolts and "lock-down" wall brackets.

Weld Screens are free-standing and custom made to your specifications. The PVC Screens have heat sealed hems on all four sides using an electronic welding process. Grommets are placed at 12" centers, to eliminate ripping and tearing. Frames consist of 7/8" galvanized square tubing. Heavy-duty square tube legs eliminate excess sway and wobble. Available in transparent or opaque PVC.

Dock Lights & Dock Accessories

TMI offers a line of Dock Lights with arms from 24" to 115". Incandescent, compact fluorescent, polycarbonate, high-pressure sodium, metal halide and quartz halogen light heads are available. Specialty lights are available. Most lights can ship immediately from our large inventory.

The line of dock bumpers includes laminated, extra-length, extra-thick, steel faced, extruded and molded. We also carry overhead door tracks, parking blocks, speed bumps and wheel chocks.

The Auto Riser prevents spotted trailers from tipping over due to landing gear collapse. This revolutionary new trailer stand complies with OSHA regulations and will keep your loading area safe and accident free. The Auto Riser has a static load capacity of up to 100,000 lbs.
